Summary

Node.js Developer with 3+ years of experience in designing and developing scalable backend applications, RESTful APIs and microservices using Node.js, Express.js and Fastify. Experienced in PostgreSQL, MongoDB, and third-party API integrations. Skilled in performance optimization, background job processing and production support. Strong debugging and problem-solving skills with experience in system optimization and real-time data processing applications.

Skills

Languages: JavaScript, Node.js

Frameworks: Express.js, Fastify

Frontend: React.js (MERN, PERN Stack)

Databases: PostgreSQL, MongoDB, Redis

Tools: Git, GitHub, Postman, Docker, CI/CD (GitHub Actions), AWS, Swagger, Bitbucket, SourceTree

Concepts: REST APIs, Microservices, WebSocket, Cron Jobs, API Integration, Performance Optimization

Professional Experience

Media Jigs - Node js developer (Remote)

July 2024 – Present

- Optimized database queries and data fetching using Node.js and PostgreSQL, improving API performance and reducing redundant database calls.
- Implemented file upload functionality, request validation and centralized error handling for REST APIs.
- Integrated third-party APIs for automated data synchronization between systems and collaborated with frontend developers and documented APIs using Swagger.

Versatile Mobitech (Versatile IT Solutions) - Junior node js developer

June 2022 – April 2024

- Developed and deployed scalable backend services and reusable RESTful APIs using Node.js and Express.js, improving code maintainability and reducing development time.
- Supported production releases, performed debugging and performance optimization and collaborated with cross-functional teams for feature development and deployment.

Projects

Sportish | (Node js, Fastify, PostgreSQL)

July 20245 – Present

- Enhanced and maintained scalable backend services for a sports live scoring and commentary platform using Node.js, Fastify and PostgreSQL, supporting real-time match data processing and multiple concurrent matches.
- Consumed third-party sports APIs to fetch real-time match data, team details, player statistics, and commentary information, automating data synchronization and reducing manual data updates.
- Streamed live match data using WebSocket for real-time client updates and automated commentary, player statistics, and match data imports using cron jobs, improving data processing efficiency and reducing manual intervention.

4TP | (Node js, Express js, MongoDB)

Nov 2022 – Oct 2023

- Enhanced a service marketplace platform enabling users to post home service requests and receive quotations from nearby providers, improving request handling and provider response workflow.
- Built RESTful APIs for service requests, quotations, user management, and provider responses using Node.js and Express.js, improving data processing and application performance.
- Enabled location-based provider matching real-time notifications and managed MongoDB operations for service and user data, improving response time and data retrieval efficiency.

Medicos-DX | (Node js, Express js, MongoDB)

May 2023 – Jan 2024

- Built backend services for a hospital management system to manage patient medical history, doctor visits, and prescription records using Node.js, Express.js, and MongoDB.
- Maintain patient records, visit tracking, and prescription data through RESTful APIs with secure data storage and efficient retrieval.

Education

MBA

Graduated: 2021

Swarnandra College of Engineering and Technology (8.15 GPA)
